For the link type codes, which are used as described in Chapter 7, "Roads in Main Map Data" and Chapter 10, "Route Planning Data," two methods are defined according to purpose.

Prefecture codes conform to the JIS X 0401 (1973).

City/ward/town/village codes conform to the JIS X 0402 (of the year of establishment specified in the applicable guideline).

32.9 Background Type Codes

This type code table is used with not only background data but also name data, search data, etc.

- Allocation rules

The 16-bit type code field is allocated to the following classifications. The bits allocated to the middle and minor classifications differ depending on the major classification value. This will be described in detail later.

Classification	Major classification	Middle and minor classifications
Size	4 bits	12 bits

The four high-order bits are used for the major classification.

Major classification	Item
0	Map symbol
1	Dining
2	Retail store
3	Retail store (spare)
4	Automobile
5	Accommodations
6	Recreation
7	Public facility
8	Traffic
9	Cultural facility
10	Other
11	Not used
12	Not used
13	System-limited identification expansion
14	Data author identification expansion
15	Spare (reserved for future use)

If the major classification is the map symbol (0x0), the remaining 12 bits are allocated to the following classifications.

Classification	Map symbol major classification	Map symbol middle classification	Map symbol minor classification
Size	4 bits	4 bits	4 bits

If the major classification is not the map symbol, the remaining 12 bits are allocated to the following classifications.

Classification	Middle classification	Minor classification
Size	5 bits	7 bits

If the minor classification is 0000000(2), it indicates the representative symbol represented by the major classification plus middle classification.
